

Fixed test data — CV A

Use this CV, alongside CV B and CV C, as scoring input in your app. Fictional candidate, created for this exercise.

Priya Anand

Backend Engineer — 5 years experience

Summary

Backend engineer with 5 years of experience building and operating production services in Python and Go. Currently a Senior Backend Engineer at a mid-size fintech, working on transaction processing and merchant-facing APIs.

Experience

Senior Backend Engineer — Ledgerly (fintech, payments), 2022–present - Designed and built the core transaction-processing service (Go, PostgreSQL), handling ~2M transactions/day across microservices. - Led the migration of the merchant API from a monolith to versioned REST endpoints consumed by 40+ external partners. - Owned schema design and query optimization for the ledger database, cutting p99 query latency by 60%. - Worked directly with the compliance team to implement data-handling changes for PCI-DSS scope reduction. - Ran production on-call rotations; led incident response for two P1 payment-processing outages.

Backend Engineer — Fetch Logistics, 2020–2022 - Built internal microservices (Python/Flask) for shipment tracking, deployed on AWS ECS. - Designed relational schemas in PostgreSQL for shipment and inventory data. - Integrated with third-party carrier APIs (REST), handling retries and partial failures.

Skills

Python, Go, PostgreSQL, REST API design, AWS (ECS, RDS, S3, CloudWatch), Kafka (event-driven order updates at Fetch Logistics), distributed systems, on-call/incident response, cross-functional communication (worked directly with compliance and support teams).

Education

BSc Computer Science, University of Manchester.
