Jordan Mills

Software Engineer — ~4 years experience

Summary

Software engineer with a background spanning backend and platform work. Enjoys solving hard technical problems and picking up new tools quickly. Looking for a role with more ownership over backend systems.

Experience

Software Engineer — Halcyon Digital (agency), 2021–present - Worked across several client projects, building backend services and internal tools using modern backend technologies. - Collaborated with teams on API development for client-facing products. - Involved in database work for a few projects, including some PostgreSQL and some MongoDB. - Helped set up cloud infrastructure for client deployments as needed. - Contributed to improving reliability of a few production systems.

Junior Developer — Bright Path Solutions, 2019–2021 - Supported a small engineering team building web applications. - Worked on backend features and some frontend maintenance. - Gained exposure to payment integrations for e-commerce clients.

Skills

JavaScript/Node.js, some Python, PostgreSQL, MongoDB, REST APIs, cloud deployment, Docker, Git.

Education

BSc Business Information Systems, University of Leeds.
